Transit

Connecting Communities
Defining Future Mobility

Public transportation helps to define how we live today, and will be even more influential in the future. Cities and communities are challenged with developing transportation infrastructure that offers mobility and connectivity, promotes economic growth and social equity, strengthens communities, and respects the environment. Public transportation is a key part of creating forward-looking communities that offer people convenient access to employment, housing, education and recreation, and provide businesses with access to labor and a network for moving goods quickly and efficiently.

Meeting Challenges
The challenges of developing transportation infrastructure have never been greater, as government agencies must contend with diminished or uncertain funding, escalating costs, and competing priorities. Meanwhile, the need for new or improved public transportation becomes increasingly urgent. Many older transit systems are in dire need of rehabilitation to extend their usability, and surging populations in urban areas demand new mobility options.

Delivering Solutions
WSP USA connects communities nationwide with our work on transit systems from coast to coast. With over a century of experience in transportation planning, engineering and construction management, we develop innovative, resilient transportation solutions for the future.

We offer expertise in every phase of project delivery, from concept to completion. Our services include strategic consulting, program management, planning, engineering design, construction management, and operations & maintenance. Transportation agencies rely on us to execute projects under every form of project delivery, including design-build and public-private partnership. We employ the latest technologies and methodologies to develop infrastructure that addresses anticipated demographic, social, and economic changes, and we plan and design transportation systems to be resilient to the threats posed by climate change.

Our engineers and planners view public transit as a means to improve the communities in which we live and work, and wherever possible we apply the latest concepts in sustainable development to improve social, economic and environmental conditions.

We help our clients find the right solutions to their challenges through innovative planning and design, deep knowledge of the federal and local regulatory environments, and strong management of project delivery.

To every project we bring a total commitment to achieving client goals, with strict attention to schedule and budget, drawing on the multidisciplinary skills of more than 7,000 professionals in 100 offices across the U.S.

For more than a century, WSP has led the development of public transit in the U.S. We strive to continue this legacy by delivering the transportation projects of the future to the highest standards of quality.
A Full Range of Services

- Strategic Advisory
- Planning
- Program Management
- Engineering
- Construction Management
- Operations & Maintenance

All Modes of Transit

- Light Rail
- Commuter Rail
- Heavy Rail
- Streetcars
- Bus Rapid Transit
- High-Speed Rail
- Automated People Movers
Sound Transit South 200th Link Extension
