

Next generation customer service operations and back office support

WSP's deep understanding of our clients' and their customers' needs, coupled with our insight into technology, process and innovation, drives our continuous focus on excellence applied to customer convenience, services and delivering superior customer experiences.

WSP is a globally recognized pioneer in toll roads, ITS, traffic management and transportation infrastructure and operations. Through our holistic experience in transportation and our culture of innovation, WSP has developed the customer service center (CSC) of tomorrow.

WSP prides itself on bringing customer facing technology and best practices from external industries such as banking and finance to the tolling industry. A key feature is our cloud based architecture which allows us to continuously innovate and modernize call center telephony and customer contact channels.

More importantly are our people. WSP believes in the long term development and retention of our call center staff through continuous training via WSP University, flexible onsite and remote work locations as available, and auditing and awarding of performance.

Your leading partner in tolling operations
