

How does this GoldSET module work?

## Siting and Routing

4 Steps

1

### Acquire and process data

We use GIS-enabled technology and publicly available resources to gather data on options for your site route.

3

### Conduct suitability analysis and optimization

Conduct corridor and siting analysis to benchmark suitable options based on critical criteria.

### Evaluate and select options

GoldSET's transparent process helps to identify the strength and weakness of each option so you can make an informed selection.

4

### Establish assessment criteria

Collaborate with our team to create assessment criteria based on your unique requirements.
