MATTERS ARISING	ACTION
1.0 INTRODUCTIONS AND WELCOME	
— PN welcomed everyone to the meeting, stated the purpose of the meeting, and shared the meeting agenda. This was followed by a safety protocol, a round of introductions, including the role of all attendees in the project. — A presentation was made to all attendees to provide information on the proposed project, the status of the Scoping and Environmental Impact Reporting (S&EIR) Process and the Biodiversity Offset Plan (thereafter referred to as the Biodiversity Compensation Plan). **the meeting was recorded for the purpose of taking minutes.*	
2.0 PRESENTATION	
2.1 **Project Background** — PN presented the project background, location and need. — The Berth 605 project area is located within the Port of Richards Bay (PoRB) and form part planned projects of the Masterplan for the Port. — She presented a locality and layout map associated with the project. — PN also highlighted the status of the S&EIR process indicating that the application for Environmental Authorisation has lapsed due to the need for a Biodiversity Compensation Plan. 2.2 **Motivation for a Biodiversity Compensation Plan (BCP)** — PN presented the following key details relating to the need for the BCP: a. Loss of the man-made tidal pool surrounded by mangroves b. Development in a Critical Biodiversity Area (CBA): Irreplaceable with Species of Conservation Concern (SCC) (CBA Map of PoRB displayed during the presentation indicating a large area of CBA at and surrounding the PoRB) c. Loss of the semi-natural shoreline resulting in impact on avifaunal habitat d. PN shared a map of the historical disturbance of the site from 2004 to 2024 indicating the man-made nature of the tidal pool and anthropogenic activities resulting in the establishment of mangroves. This image indicated the self-preserving nature of the site. 2.3 **Conceptual Biodiversity Conceptual Plan** — PN provided information on the content of the BCP — The intention for the BCP is to recreate a structurally comparable habitat to the tidal pool area that will be lost. — The compensation area was selected by TNPA and is only available land due to the Masterplan. — PN expressed the early stage of the plan that is subject to change. — PN then presented the total hectares of biodiversity loss. — She then presented a map indicating the recreated tidal pool area and shoreline. — PN explained that the 30:1 ratio according to the offset guidelines cannot be implemented for this project due to the constrained amount of land available within the PoRB and offsetting/compensation outside the port is not being considered by TNPA due to limited funds. — PN shared information on the available land set aside at the PoRB for offsets which was made available for port development, and it is an option being investigated.	
3.0 DISCUSSION	
— Mazwi further added that this meeting is a follow up from the meeting in August 2025. He stated that the BOG requested the existing specialist studies which was shared with the BOG. — He also indicated that the BOG members expressed some uncertainty regarding the proposed BCP. — Dominic from EKZNW, required clarity on the term secondary mangroves and not naturally occurring vegetation. He also expressed importance of understanding these terms before further discussion. — PN responded stated that secondary mangroves refer to re-established mangroves, the same applies to the not natural occurring vegetation. — Rudolph further explained that secondary is to illustrate that it was disturbed in the past and the current vegetation is a response to initial disturbance. — Ayanda enquired about engaging with the offset guidelines and the opportunity to further investigate the offset ratios depending on the state of the area to be lost. He also enquired about the size of the offset area available for the implementation of the CBP.	

— Rudolph responded stating that the CBA 1 ratio was used and the 30:1 ratio was used as the worst-case scenario and depending on negotiation with the authorities, it can be scaled down. He further added that other areas were identified but not investigated as TNPA requested that areas outside the PoRB should not be investigated. — Dominic reiterated the use of the term secondary and why it should not be used further. He also stated that if there is a lack of funding then insufficient funds were committed to the project to make it sustainable. In terms of the areas identified outside the PoRB included an existing protected area managed by EKZNW, it should not be considered and does not meet offset requirements. The area within the South Dunes precinct was set aside for that specific precinct and not for Berth 605 offset receiving areas. — Nelson enquired about mangrove areas outside the green belt area (where mangroves did exist historically) such as the Umgeni River area and if it can be considered for compensation areas. He added that if an acceptable ratio is impossible to achieve, what would be the way forward. — Dominic responded stated that TNPA should ensure that best principles are applied and suitable receiving areas are investigated. He added that mangroves have not established well outside Richards Bay. He stated that he is unsure if trying to establish mangroves in areas where they once did exist, would be possible due to the various factors which contribute to the establishment of mangroves. — Nokhuthala enquired of the BOG if the concept BCP could be achieved i.e. referring to the re-creation of the tidal pool and shoreline. She then enquired if the BOG would consider reducing the ratio for compensation if the removal of alien invasives plants was implemented by TNPA. — Dominic responded stating that it is a good idea but in terms of implementation, he is unsure if the desired outcome can be achieved. — Dominic stated he is only one member of the BOG and relies heavily on colleagues at EKZNW to provide detailed comments on the BCP which is not available at this stage. — David commented from a waterbird perspective, stated that mangroves are least important for waterbirds. He stated that the configuration of the compensation area is important. Exposed shorelines would mean less mangroves, but sheltered environment would result in thriving mangroves. — Rudolph responded stating removal of alien invasive species will not count as offset but rather restoration. He also stated that the area loss of coastal forest loss will be higher than mangroves and must be considered. — Nokhuthala enquired if the transplant of certain species can contribute to the compensation for the coastal forest. — Rudolph responded stating that the species removed would be investigated to determine if transplanting of other species would contribute to creating the compensation site. — Nokhuthala stated that guidance on the BCP would be greatly appreciated as it would assist the specialist during the site visit. — Dominic responded stating that the Memorandum of Understanding on Coastal Forest would need to be reviewed in relation to the proposed Berth 605 BCP and guidance would be provided in due course. — Ayanda stated that a response to the BCP can only be provided when the ratios are finalised. — Rudolph stated that the BCP Report will contain all the information required. It will contain the known areas to be lost and that the compensation area provided for by TNPA will be insufficient to meet the requirements for offset. He added that the 30:1 ratio would not be possible but discussions with EKZNW around the ratios would be required to reduce the offset ratios. — Nelson stated that a discussion with EKZNWL can be facilitated to discuss the requirements and negotiations around the offset ratios. — Mazwi concurred with Nelson and highlighted that the next steps in the S&EIR process are crucial with particular reference to the timelines. — Ayanda stated that the issue of offset/compensation is challenging. He stated that EKZNW has areas they manage in the province and maybe a calculation in monetary value could be made in terms of the difference between what is compensated for and the shortfall. — Dominic responded to the comment on alien invasive clearing. He stated that technically it does not form part of the offset proposal.	
4.0 WAY FORWARD	
— Mazwi stated that another session with the BOG is required to map a way forward once the specialists finalise the investigations. — Any additional reports to be shared with the BOG when available.

MATTERS ARISING	**ACTION**
1.0 INTRODUCTIONS AND WELCOME	
— RG welcomed everyone to the meeting, stated the purpose of the meeting, and shared the meeting agenda. — A presentation was made to all attendees to provide information on the Biodiversity Compensation Plan (BCP). **the meeting was recorded for the purpose of taking minutes.*	
2.0 PRESENTATION	
2.1 **Background and Findings** — RG provided information on the various specialist studies undertaken as part of the Scoping and Environmental Impact Reporting (S&EIR) process. He added that the motivation for the BCP was that residual impacts are still associated with the project despite following the mitigation hierarchy. — He presented maps of a Critical Biodiversity Area (CBA): Irreplaceable and vegetation types. — RG stated that the project area includes transformed areas but also other areas that have high ecological importance. — He added that there were Species of Conservation Concern (SCC) observed in the project footprint as well. — RG presented the historical disturbance of the site resulting in the creation of an estuarine habitat (tidal pool) fed by a pipe. — RG provided information on the estuarine nature of the tidal pool including vegetation and fish species. — He then discussed the findings of the Terrestrial Biodiversity Assessment which concluded that medium to high impacts following mitigation requires compensation. 2.2 **Biodiversity Conceptual Plan** — RG discussed the habitats of concern that formed the basis of the BCP i.e. mangrove forest, coastal grassland and coastal forest areas and the associated value of these habitats. — He then presented the compensation requirements and the associated area (in hectares) for each of the habitats. — RG presented a map of the compensation site, the proposed area of the tidal pool and recreated shoreline. — BB added context to the BCP. He explained the recreated tidal pool area will provide connectivity and will result in a tidally influenced pool similar to the existing one and the area for the establishment of terrestrial vegetation. — DA added that the shoreline habitat is recreated to compensate the loss of the semi-natural shoreline for wading bird species.	
3.0 DISCUSSION	
— AC enquired about the size of the compensation area and if will accommodate the vegetation that will be removed. — RG responded stating that it is approximately 7 hectares available. — DW stated that the presentation refers to an offset, but it was agreed that it does not comply with the principles of offset but rather compensation. He also stated that like for like cannot be guaranteed. — RG stated that the use of the term offset was to create association with the offset guidelines but the change to compensation will be made going forward. — AM enquired about the provincial biodiversity guidelines by EKZNW and the national biodiversity guidelines that were also gazetted. He enquired if the national guidelines were consulted and to what extent. He requested information on the condition of the compensation area and the ratios that will be applied. He also requested information on the activities that TNPA will undertake in the compensation area.	

— RG responded stating that the BCP is based on the national biodiversity offset guidelines and the offset ratios within the guideline document. He added that the details are further explained in the BCP Report. — BB added that the supporting specialist studies provides further details on the areas investigated. — YG enquired about how the national biodiversity guidelines were applied despite it stating that the guidelines are not applicable to marine and estuarine environments. — RG stated that there are well represented terrestrial environments and the offset guidelines applied to these areas. He added that best practise was used to guide the proposal for compensation of the marine and estuarine environments. She reiterated that this would then not be considered an offset plan and not a compensation plan. — SB stated that consideration must be given to areas that appear to be terrestrial in nature but within the Estuarine Functional Zone (EFZ) and if the compensation plan applies to these areas as well. — RG stated that terrestrial plant species and habitats were found in the EFZ. — YG concurred with SB stating that it will be helpful to confirm with already mapped species and vegetation units so that the BCP does not contradict these existing SANBI maps. — DW stated that he is not convinced that the offset guidelines were implemented as explicitly as stated particularly because a 1:1 ratio is being proposed. He stated that he needed to understand the motivation for this ratio. — RG responded stating that it is widely understood that the mangroves in the port is abundant. He also stated that the BCP report provides a motivation for a reduced ratio and the limitations associated with the strict implementation of the 30:1 ratio. — BB stated that WSP will further engage with the BOG to align on the proposed ratio. — YG enquired about the statement made about the mangroves occurrence in ports and its abundance. — RG explained that mangroves at the PoRB is abundant and can easily re-establish. — DW enquired if averted loss was incorporated into the calculations. — RG stated that the calculations are straight forward and averted loss was not considered but open to further discussion. — DA explained the current configuration needs to be taken into account for protection of wave action as the current embayment is protected. — BB enquired if there were any final questions and/or comments. — None were raised. — NM thanked the team for availing themselves and for the open discussions. He expressed the importance of these meetings in guiding developments.	
4.0 WAY FORWARD	
— Circulation of the finalised BCP early next week for comment by the BOG — WSP remains available to discuss any further comments that will arise from this meeting	WSP

Dear Colleagues,

I hope you are well and safe.

Please receive the attached specialist reports as discussed in the meeting that was held on the 29 August 2025 where the Berth 605 project team presented the offset option. The project team is busy with the biodiversity offset plan.

Regards,

Lungile OBO Nokhuthala Hlongwane (KZNLH Environmental Specialist).

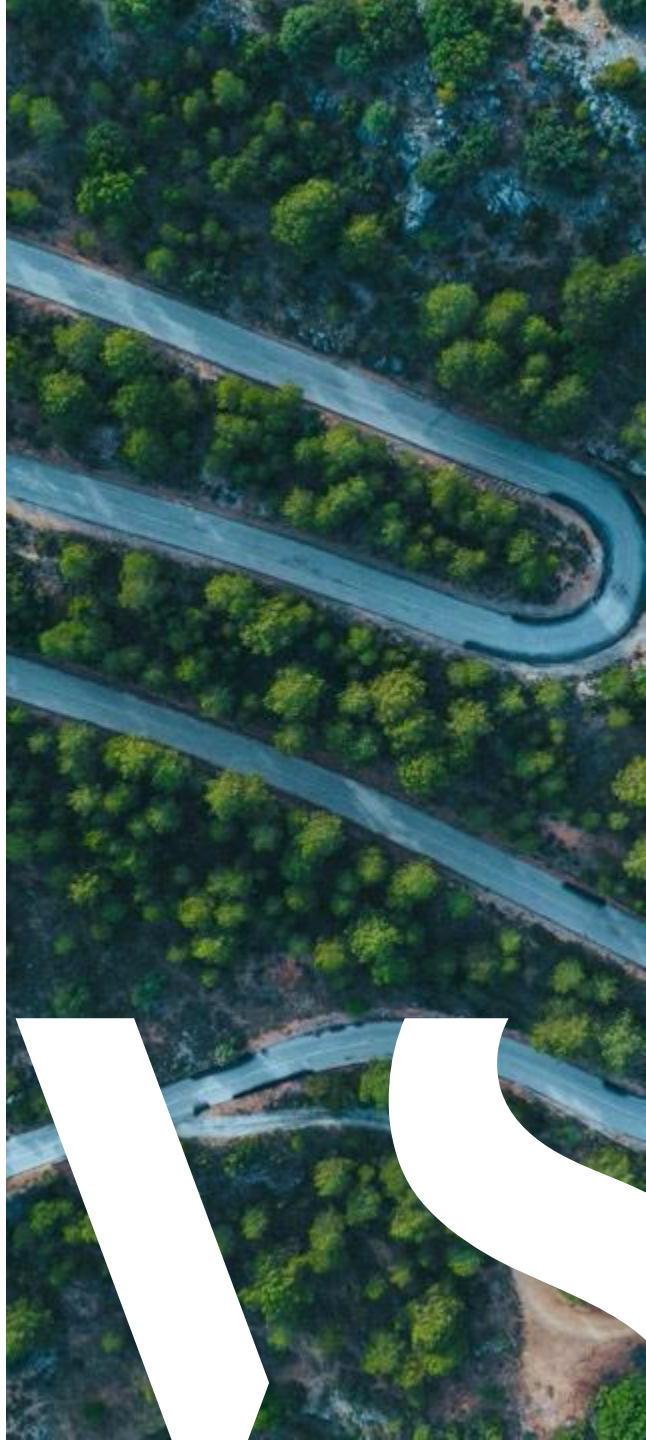
MEETING PRESENTATIONS

Public

Development of Berth 605 and associated infrastructure in support of the Container Handling Facility at the Port of Richards Bay

Transnet National Ports Authority

Biodiversity Offset Group Meeting – 25 November 2025



Agenda

1. Welcome
2. Safety Protocols
3. Introductions
4. Purpose and Project Overview
5. Environmental Approval Status
6. Offset/Compensation Plans (Concept)
7. Presentation of offset targets
8. Discussion
9. General

Purpose and Project Overview

- Berth 605 project falls within the PoRB Masterplan within the Bayvue Precinct. Other precincts that form part of the PoRB Masterplan are South Dunes and Newark Precincts.
- The Berth 605 project falls within the short-term plan (2032) for the PoRB. According to TNPA, the overarching objective of the project is to have a dedicated berth for the Container Handling Facility (CHF) at the PoRB. The New Berth 605 will ensure that the 606 to 609 berths are utilised for the MPT and not for handling of containers. This will result in an improvement in the operational efficiency of the MPT. The CHF with the berth will ensure that this facility will have high operational efficiencies.

Status of the Environmental Application

- WSP Group Africa (Pty) Ltd (WSP) was appointed by Transnet National Ports Authority (TNPA) to undertake the Scoping and Environmental Impact Reporting (S&EIR) process as the independent Environmental Assessment Practitioner (EAP) for the project.
- An application for Environmental Authorisation (EA) was submitted to the Department of Forestry, Fisheries and the Environment (DFFE) on 18 November 2024 and a Final Scoping Report (FSR) was submitted on 20 January 2025 which was subsequently accepted on 28 February 2025 which was within the regulated timeframe for the acceptance of the FSR.

Status of the Environmental Application cont...

- The Environmental Impact Assessment (EIA) Phase included several specialist studies that were conducted between January 2025 and April 2025. Studies relevant to this memorandum are:
  - Terrestrial Biodiversity Assessment – WSP, 2025
  - Baseline Estuarine and Marine Ecology Assessment – CSIR, 2025
  - Avifaunal Assessment – David Allan, 2025

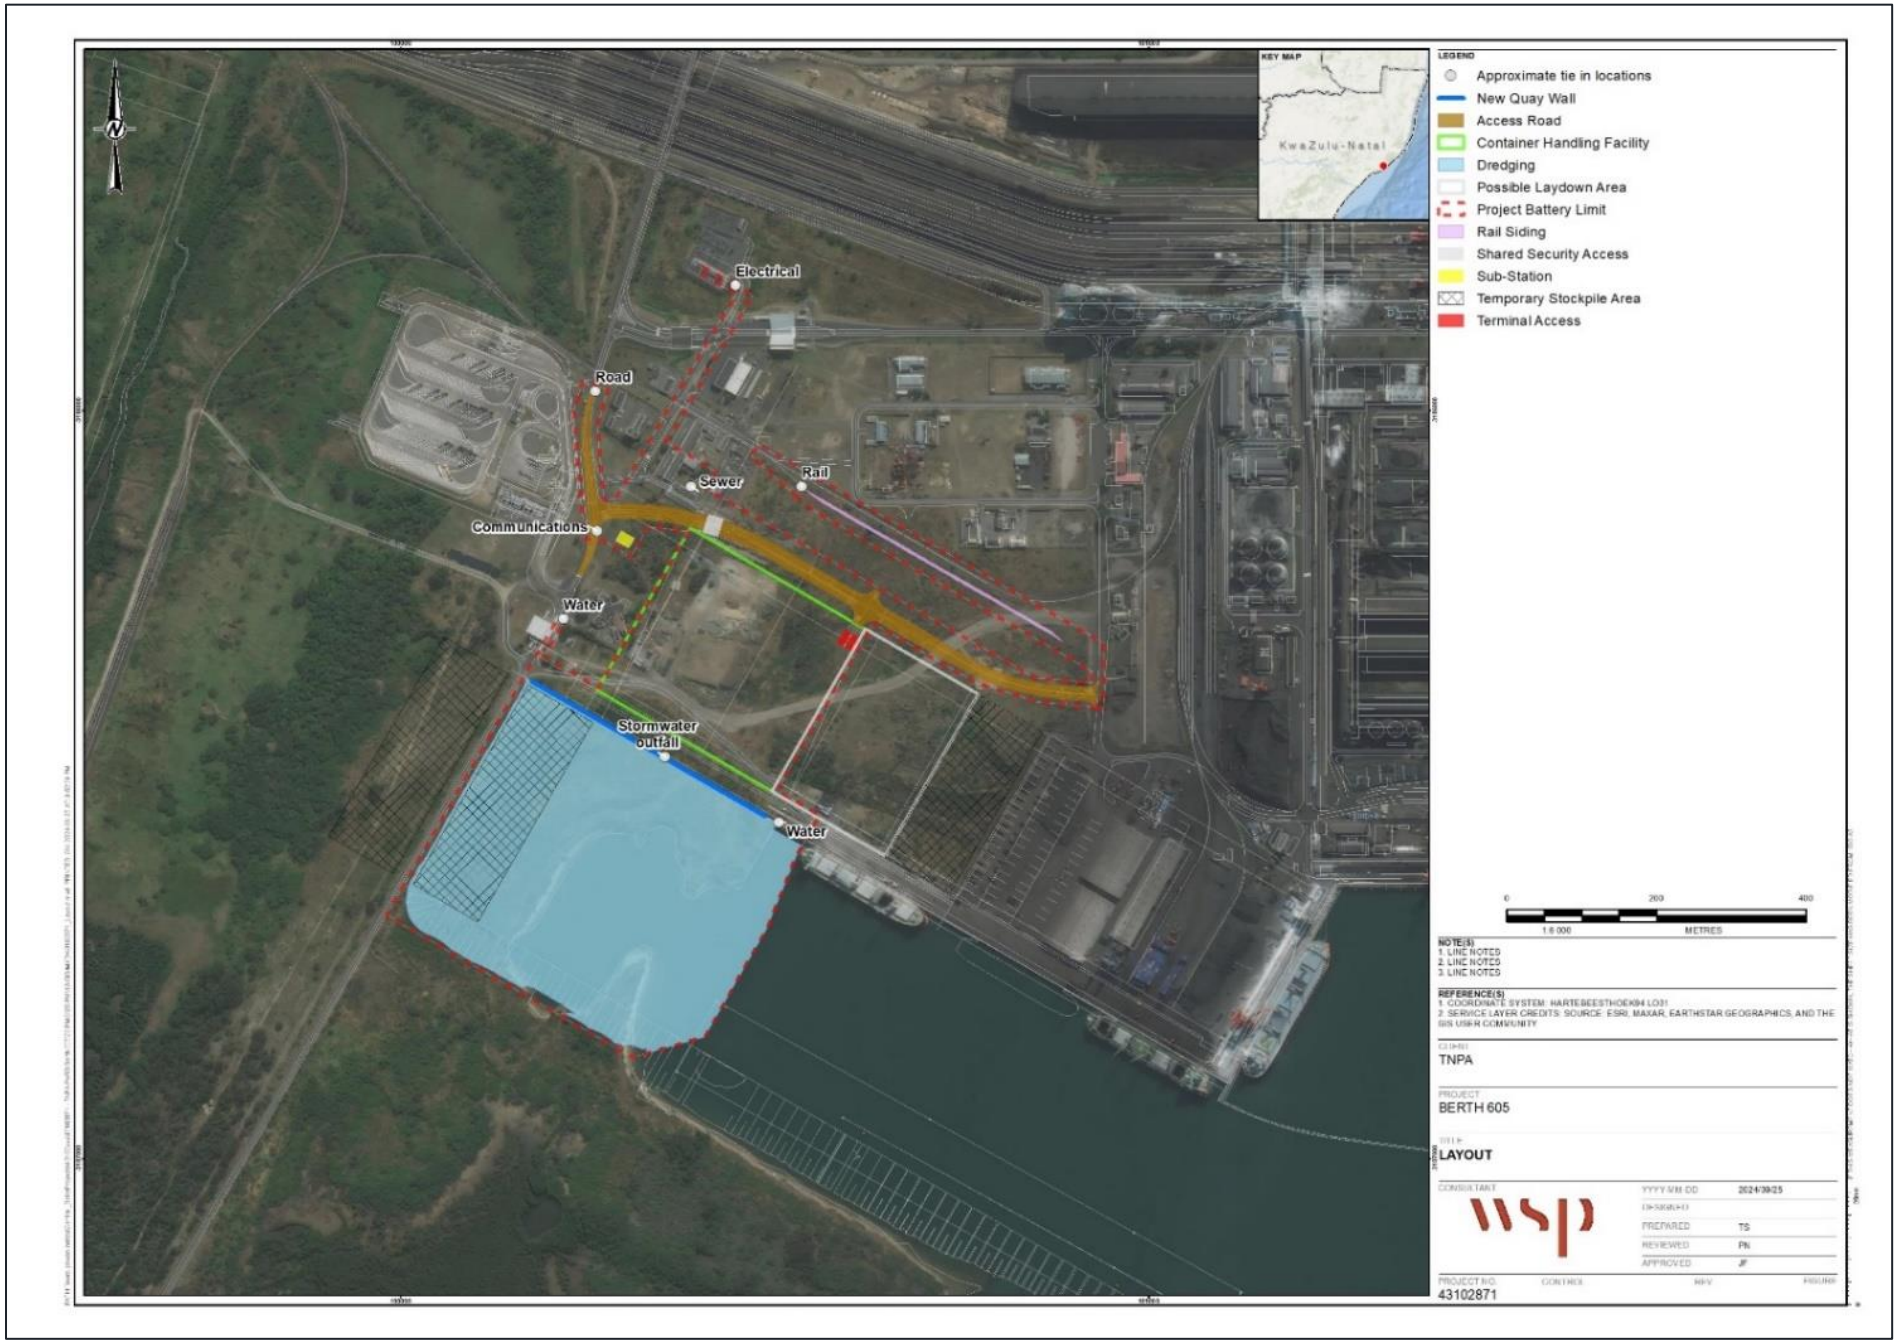
These studies revealed that an Offset/Compensation Plan is required due to the following:

- The loss of the man-made tidal pool surrounded by the secondary mangroves, which forms part of the historic estuarine environment which has now been significantly developed into a port.
- Dredging of land that is considered terrestrial located within a Critical Biodiversity Area (CBA): Irreplaceable with Species of Conservation Concern (SCC).
- The impact on the secondary mangrove path and on the 960 m stretch of semi-natural shoreline would have direct impacts on avifaunal habitat which would require offsetting.

Layout Map:

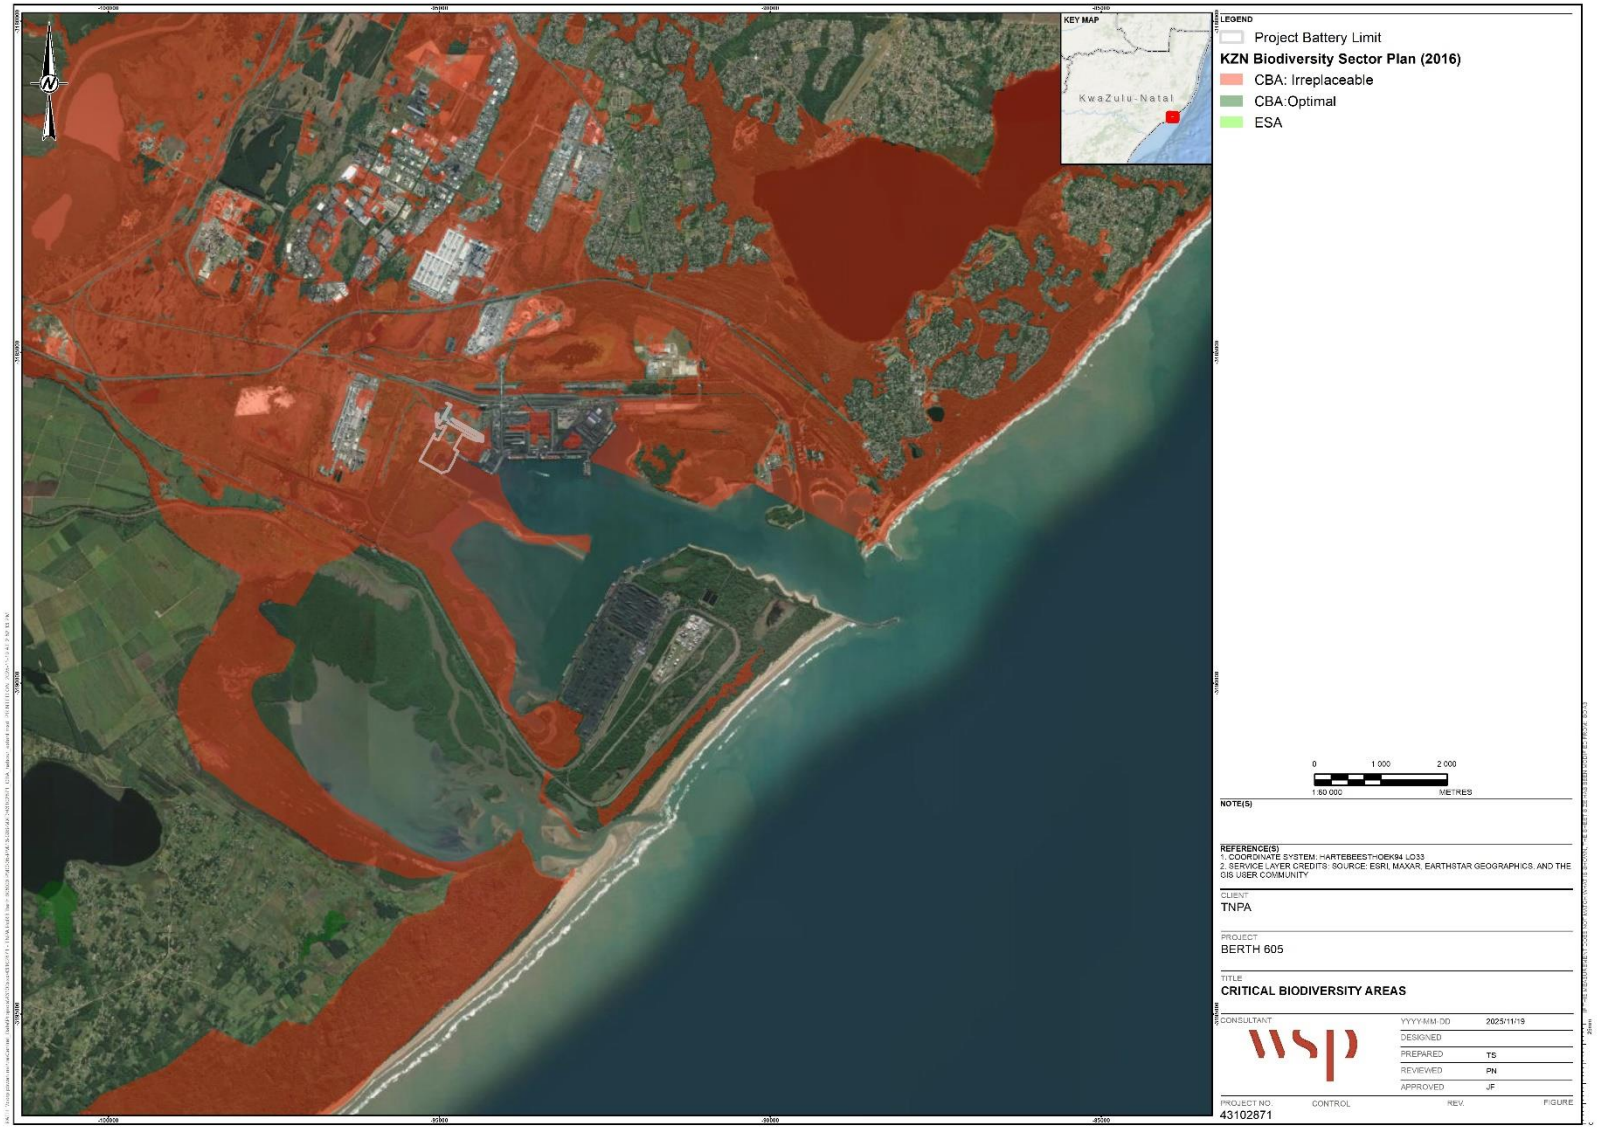
The PoRB is situated on the north-eastern coast of KwaZulu Natal (KZN) and falls within the uMhlathuze Local Municipality (ULM) and King Cetshwayo District Municipality (KCDM).

The GPS location of Berth 605 are: 28°47'25.71"S; 32° 1'37.70"E



CBA of the Port

The delineation of the CBA indicates that majority of the PoRB including a large portion of the Berth 605 project footprint and associated industrialised areas is considered CBA.



Site Ecological Importance

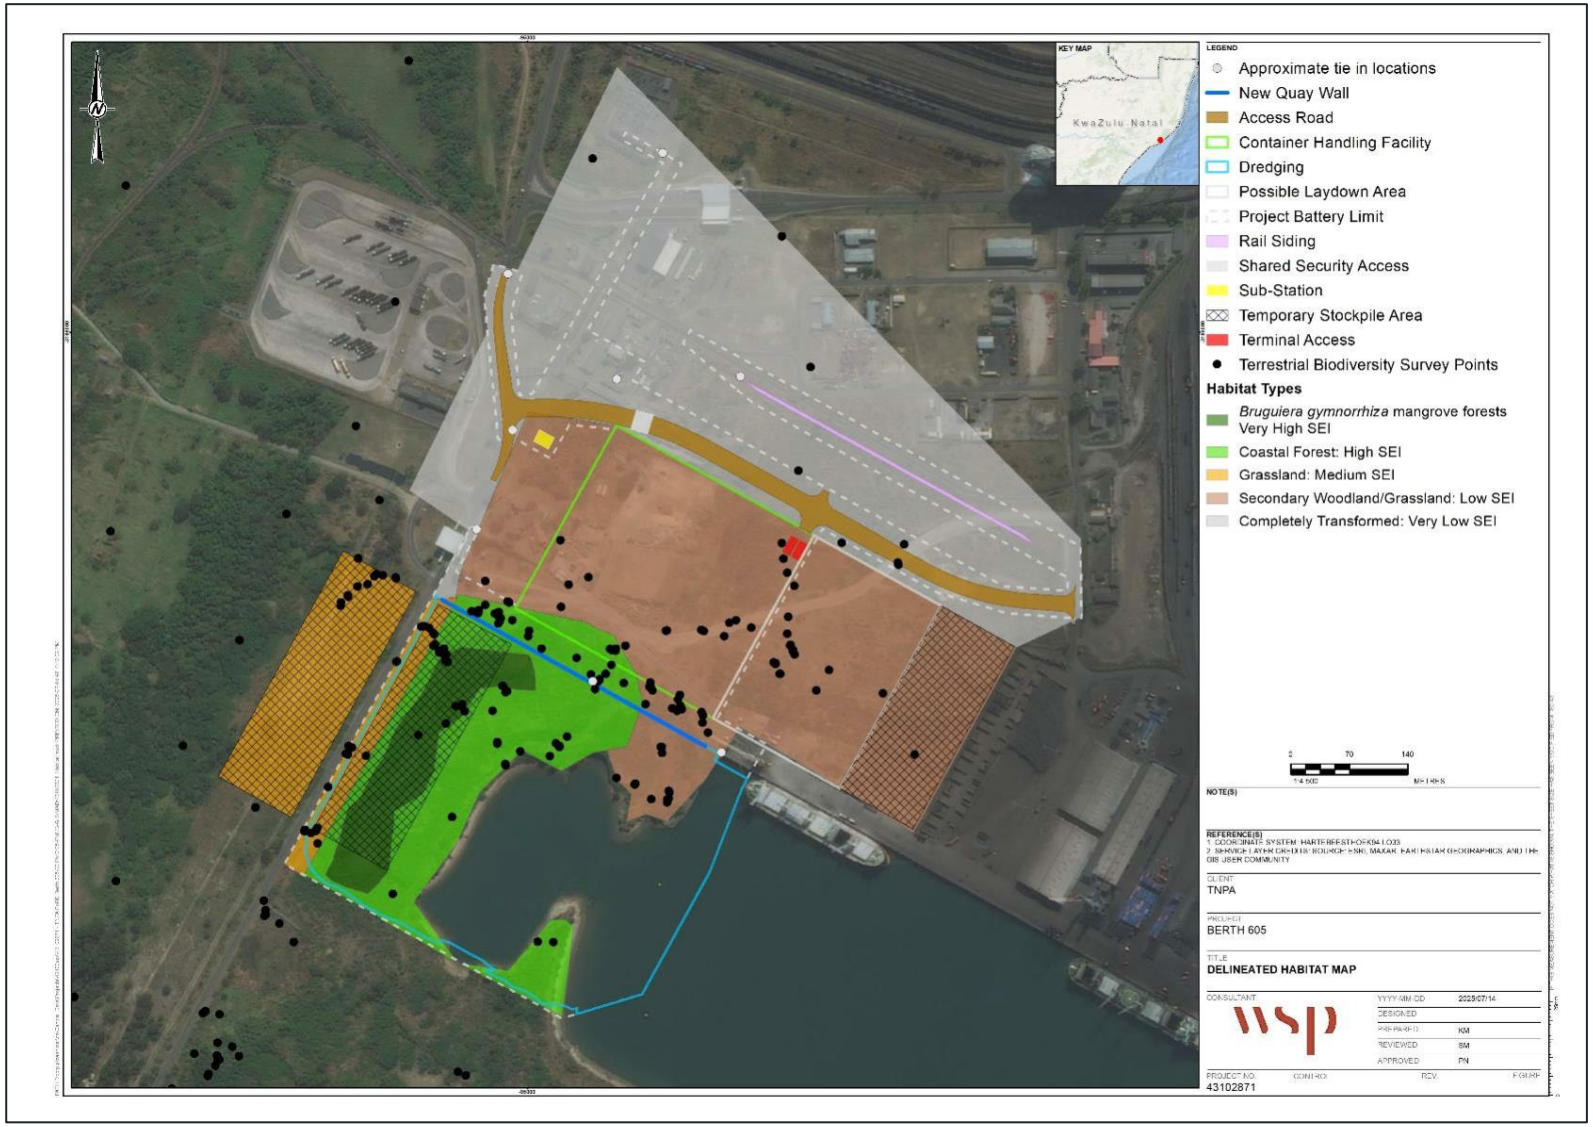
Man-made tidal pool and secondary mangroves – Very High SEI

Re-established Coastal Forest – High SEI (terrestrial surrounding the tidal pool)

Re-established Grassland – Medium SEI (stockpile areas either side of Harbour Road)

Secondary Woodland/Grassland – Low SEI (Container Handling Facility Site)

Transformed – Very Low SEI (Access Road)



Mudflats

Kabeljous Flats – The Berth 605 project will have no impact on the Kabeljou Flats and Sandspit

Historical Disturbance at the Site

Aerial views of part of the Port of Richards Bay showing the transformation of an excavated area into artificially created functional estuarine habitat. Dates for satellite images: top left – 2004; top right– 2006; bottom – 2024

Offset/Compensation Plan

Offset Guidelines –

The DFFE released South Africa's first National Biodiversity Offset Guideline in June 2023 (Government Gazette 48841) to support Section 2(4)(a)(i) of NEMA, which mandates that ecosystem disturbance and biodiversity loss must be avoided, or where unavoidable, minimized and remedied. The term "remedy," as defined in Government Gazette 46088 (March 2022), includes rehabilitation, restoration, and biodiversity offsetting. Offsetting is required only when significant residual biodiversity impacts remain after all efforts to avoid, minimize, and rehabilitate have been exhausted. The Guidelines emphasize that offsets must follow the mitigation hierarchy and align with the broader environmental offsetting policy.

Terrestrial – Criteria supporting CBA 1 Designation

- Secondary mangrove forest
- Species of Conservation Concern (SCC) recorded on site
- Potential for suitable habitat for *Hyperolius pickersgilli* however not sited at the project footprint (currently being investigated).

Estuarine and Marine – Criteria supporting CBA 1 Designation

- Secondary mangrove forest

Offset/Compensation Plan

On site verification

A secondary mangrove forest surrounding the tidal pool was recorded in the project area. This reflects new mangrove habitat establishment surrounding a man-made depression landscape connected to the marine environment via a pipe. The intent of the original excavation is understood to have been a stilling basin to intercept stormwater runoff from the adjacent partially developed areas. This previous small basin was connected to the marine environment within the port via a pipe culvert at an elevation that is within the tidal range.

Conceptual Plan

- Long-term port development plans create a challenge in terms of available area for compensation.
- Habitat compensation considerations will be based broadly on South Africa's National Biodiversity Offset Guideline. The conceptual proposal is to create structurally comparable habitat to the existing small man-made tidal pool, along the south-southwestern part of the lengthened 600 Berth Basin. The effective length of the shoreline in the basin will also be increased by dredging indentations into the shoreline and potentially making the shoreline morphology shallower. This is the only compensation area under consideration since other potential compensation sites in the port are designated for longer-term development and are consequently not able to demonstrate permanence.

Offset/Compensation Plan

- Provided the excavated area for tidal pool creation is of a depth that it does not drain dry at low tide and there is a permanent tidal connection to the 600 Berth Basin, there is every reason to believe the compensatory habitat would be similarly colonised by mangroves and other biological resources over time and would make as important an ecological contribution per unit area to the port as the existing tidal pool.
- There is no need to translocate biota from the existing tidal pool to the created pool, although the removal of easily collected biota and their placement in mangroves elsewhere is recommended. The created tidal pool will take time to stabilise in terms of its biogeochemistry.
- Translocated biota might (and probably will) thus succumb during the stabilisation period. The recommendation, therefore, is to allow nature to take its course in terms of faunal and floral colonisation and exploitation of this habitat.
- The existing man-made tidal pool in which secondary mangrove habitat has established was shaped 19 years ago. Consequently, the habitat units represented within this area have re-established within approximately 20 years.

Offset/Compensation Plan

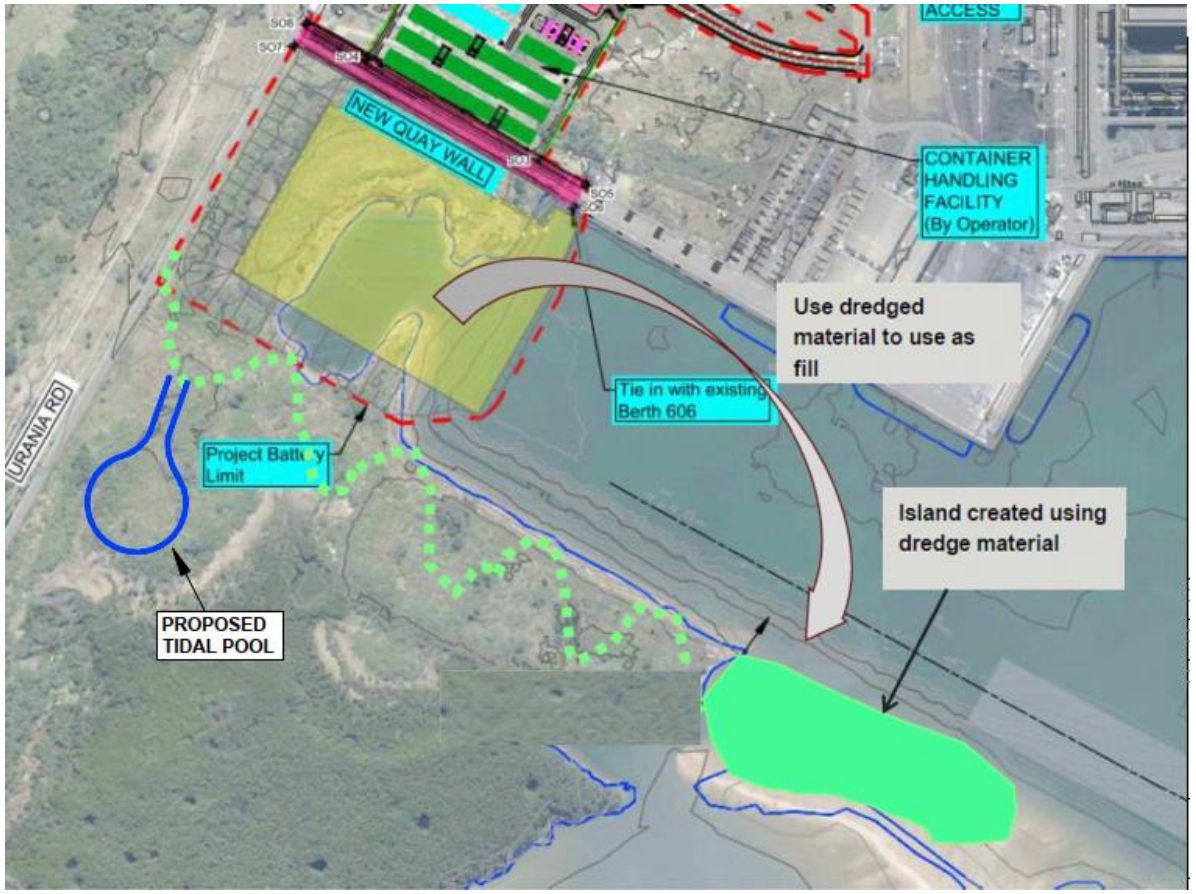
- Preliminary terrestrial offset calculations (N.B: still to be refined by the specialists) –

Offset requirement per vegetation/SEI type

Vegetation Type Name	SEI: Ha	Infrastructure	Area_Ha
Secondary Mangrove forests: Very High SEI	Very High total: 2.06	Port Basin expansion, Dredging	0.430538
Secondary Mangrove forests: Very High SEI		Temporary Stockpile Area	1.630604
Coastal Forest: High SEI	High total: 5.05	Container Handling Facility	0.286707
Coastal Forest: High SEI		Temporary Stockpile Area	0.941427
Coastal Forest: High SEI		Port basin expansion, Dredging	3.825374
Grassland: Medium SEI	Medium total 3.78	Port basin expansion, Dredging	0.193537
Grassland: Medium SEI		Temporary Stockpile Area	0.50817
Grassland: Medium SEI		Temporary Stockpile Area	3.080214
Total			**10.89**

Offset/Compensation Plan

- Given that there are constraints in terms of available space to offset/compensate for the Berth 605 project, the following area was proposed by TNPA and is currently being investigated by WSP and the appointed specialists.



Offset/Compensation Plan Considérations and Contraints

- Available space/land available for the offset
- The site is a secondary in nature and vegetation including mangroves established as a result of port development and is not naturally occurring.
- The re-establishment of the mangroves and vegetation at the site previously indicates the potential to re-establish again.
- The transitional and unnatural nature of the tidal pool surrounded by the mangroves.

Conclusion

- Based on the current plans for the PoRB and the land available for offset/compensation, the 30:1 ratio for offset according to the guidelines, cannot be achieved for this project within the Port.
- In addition to land constraints, almost the entire PoRB is designated as CBA however it is land that was always set aside to be developed as a Port.
- Coupled with the lack of funds to purchase land outside the Port and the timeous process, TNPA, WSP and the appointed specialists are currently investigating the alternative option which is to re-create a similar environment within and adjacent to the project footprint.
- The mangroves are secondary in nature and are growing and taking over port vegetation at a rapid pace.
- It must be noted that the PoRB Masterplan already includes an Environmental Green Belt Area which should be considered during future engagement. In addition, during the development of the poRB during the 1970s (pre-NEMA) it is believed that the area adjacent to the port was designated for conservation purposes to accommodate for port development.

Public

February 27, 2026

Port of Richards Bay; Proposed Berth 605 and Container handling facility

Biodiversity Offset Report

27 February 2026

Rudolph Greffrath, Biodiversity Specialist

Introduction

- *WSP Group Africa (Pty) Ltd was appointed by Transnet National Ports Authority (TNPA) to undertake the environmental authorisation process for the proposed Berth 605 Container Handling Facility and associated infrastructure.*
- *In support of the EIA process, a number of ecological specialist studies were undertaken to inform specialist impact assessment. Port infrastructure typically becomes permanent infrastructure. Consequently, there will be residual biodiversity impact and a Biodiversity Offset Report (BOR) has thus been prepared.*

Background, Purpose and Project

- *The project is located within the Port of Richards Bay (PoRB) in KwaZulu-Natal, South Africa.*
- *The BOR assesses offset requirements and evaluates the suitability of potential offset site in accordance with national guidelines.*
- *The Berth 605 development forms part of the Bayvue Precinct, as identified in the Port Development Framework Plan (PDFP) and the Port of Richards Bay Master Plan (2021–2035).*
- *Due to the presence of critical biodiversity areas and species of conservation concern, biodiversity offsets are considered inevitable despite avoidance and mitigation measures.*

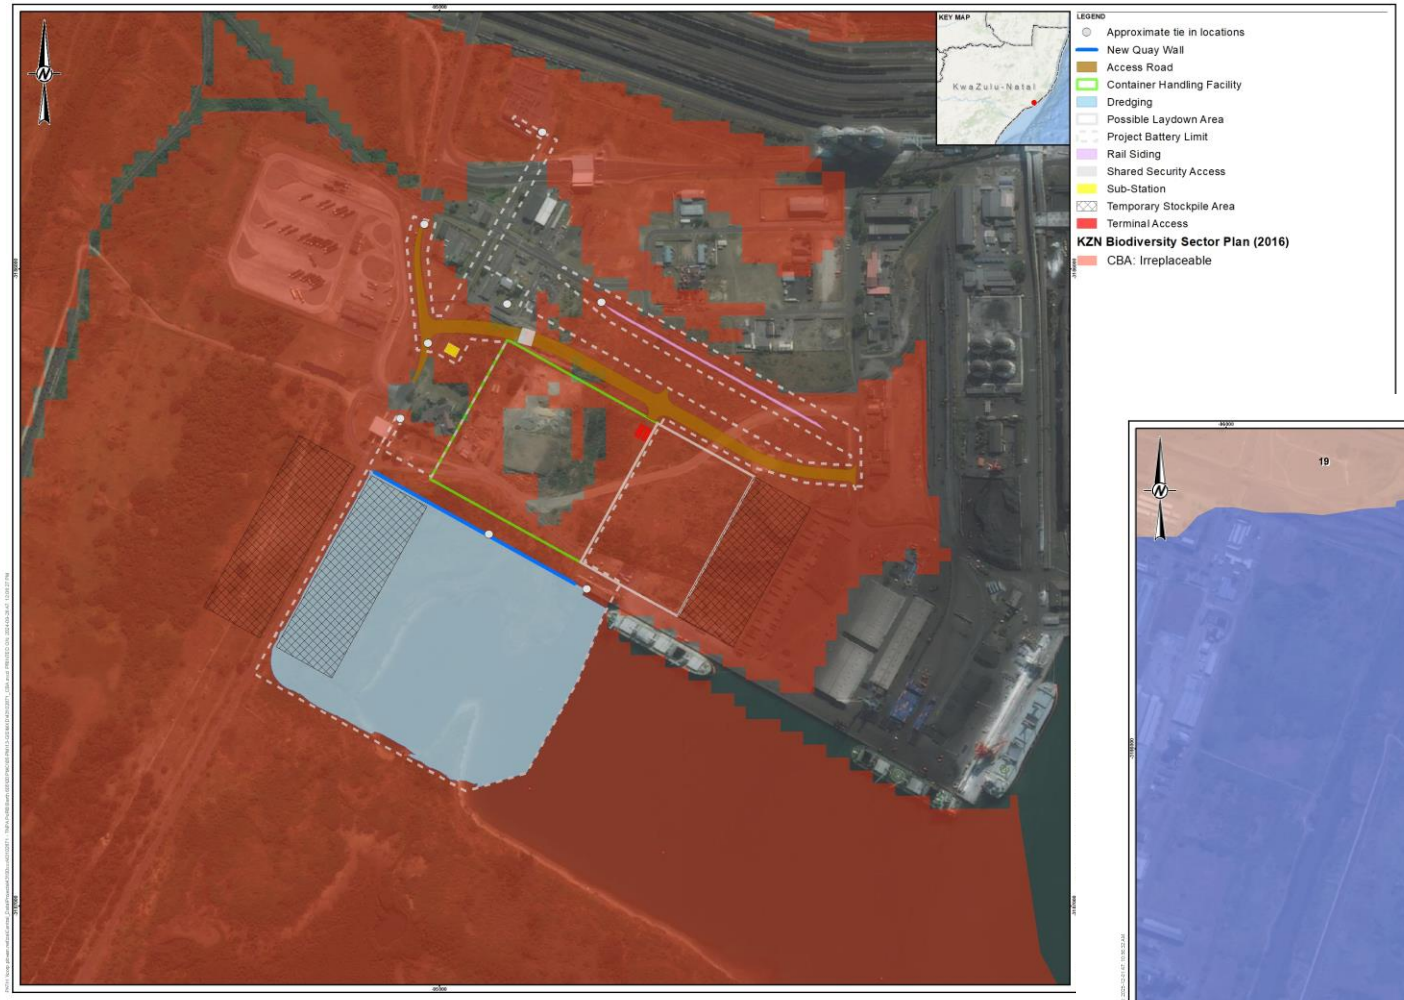
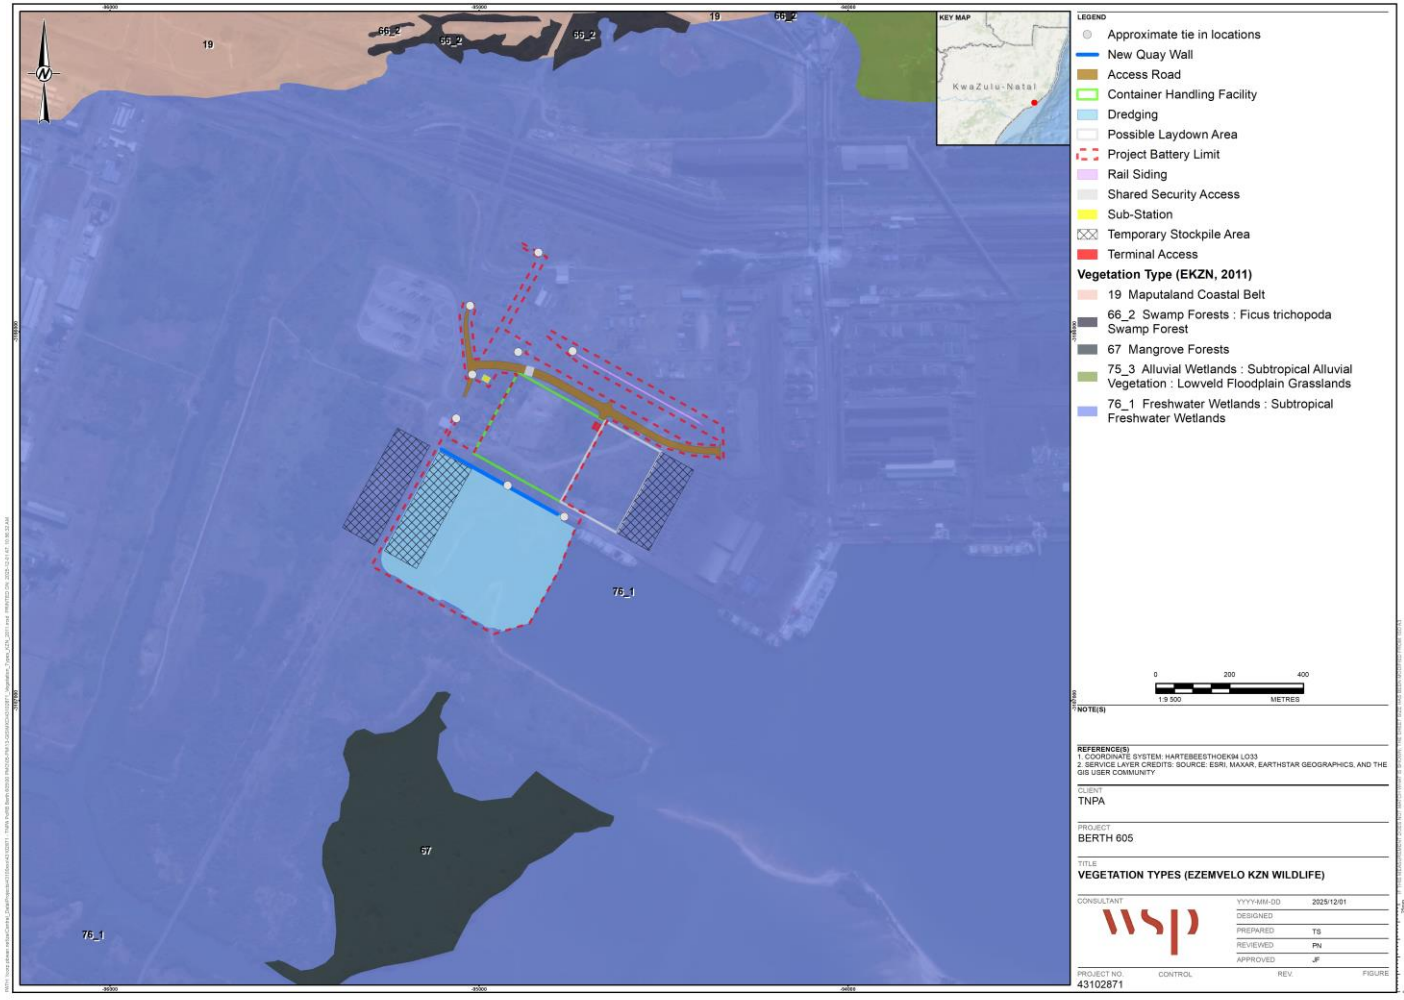
Biodiversity Overview

- Terrestrial Critical Biodiversity Areas
  - *LSA within CBA1 Irreplaceable as per KZN Biodiversity Sector Plan (2016) due to Maputaland Coastal Grassland (Endangered) and Mangrove forests (Endangered).*
- Priority Areas for Protected Areas Expansion
  - *the LSA coincides with Priority Focus Areas as part of the National Protected Area Expansion Strategy (2018) .*
- Protected Areas
  - *Richard Bay Game Reserve is listed on the National Protected Areas Register (DFFE, 2022) and is located approximately 1.48 km South.*

Biodiversity Overview





Biodiversity Overview Cont.

- *Key Biodiversity Areas*
  - *The entirety of the LSA occurs within a KBA namely 'Richards Bay Coast (100896).' Richards Bay Coast is a terrestrial site found in KZN, South Africa.*
- *Terrestrial Biodiversity*
  - *LSA within Maputaland-Pondoland-Albany Biodiversity Hotspot*
  - *Transformed Areas – Low SEI*
  - *Secondary Woodlands and Grasslands –Medium SEI*
  - *Moist Grassland – Medium SEI*
  - *Mangrove Forest – Very High SEI*
  - *Coastal Forest - Very High SEI*

Biodiversity Overview Cont.

- *Flora Species*
  - *Site surveys confirmed that two declining plant species are present, and eight protected tree species.*
- *Fauna Species*
  - *Two mammal SCC species recorded African Clawless Otter (Aonyx capensis) - Near Threatened and Samango Monkey (Cercopithecus mitis labiatu) – Vulnerable.*
- *Herpetofauna*
  - *SCC recorded, the Eastern Hinged Tortoise (Kinixys zombensis), Near Threatened, Setaro's Dwarf Chameleon and Green Mamba (Dendroaspis angusticeps) were recorded.*
- *Invertebrates*
  - *Four species are indicated as Vulnerable, Flat-necked Shieldback (Arytropteris basalis), East Coast Katydid (Pomatonota dregii), Gossamer-winged Butterfly (Teriomima zuluana), Millar's buff (Deloneura millari).*

Biodiversity Overview Cont.

- *Avifauna*
  - *Six Terrestrial Red Data bird species encountered during the field surveys.*

Historical Disturbance

- *Artificially created tidal pool*
  - *Berth 300 development roughly 20 years ago*
  - *Construction of caissons for the development of Berth 306*
  - *Remaining depression was connected to the port waterbody by a pipe to drain the site, but which allowed tidal flow of water into the pit, and, consequently, the eventual creation of estuarine habitat and ecological function.*
  - *Over time various marine and terrestrial fauna recolonised the pool and surrounding habitat (Crabs, burrowing prawns, swimming prawns, and fish have established populations in the pool, while larger fish appear to make use of the pool for feeding on the high tide. Birds, snakes, chameleons and frogs are abundant in the surrounding habitat. Mangroves (three species) have established around the pool).*
- Given the right conditions, connectivity with the main embayment and tidal influence, this artificially created habitat has developed rich fauna and flora populations.

Historical Disturbance

Estuarine and Marine

- *Artificially created tidal pool*
  - *Tidally influenced inland pool within the Assembly Basin representing mangrove swamp and possible mudflat habitat.*
  - *Identified as the most sensitive and ecologically significant area within the Berth 605 Project footprint.*
  - *Fringed by mangrove trees, including the protected Black Mangrove.*
  - *Supports a high diversity of fish and invertebrates.*
  - *Fish assemblage dominated by juveniles, indicating strong nursery function.*
  - *Composition of fish included:*
    - 56% estuarine breeders
    - 33% euryhaline marine species
    - 11% marine species independent of estuaries
  - *Larger fish, particularly Category II species, congregate in deeper areas near the pipeline connection during low tide.*
  - *The pool plays a critical role as both a feeding and nursery habitat.*

Biodiversity Mitigation

- The local study area (LSA), including project infrastructure, is located within a high biodiversity value landscape.
- The area interacts with natural habitats and zones mapped as terrestrial Critical Biodiversity Areas (CBAs). CBAs are identified in terms of the KwaZulu-Natal Biodiversity Sector Plan (2016).
- Due to this sensitive setting, residual impacts on biodiversity have been identified.
- These impacts range from moderate to very high significance.
- Affected receptors include both species and ecosystems.
- The impacts are documented across terrestrial and maritime biodiversity specialist assessment reports.

Targets for Offset

- *Habitats of concern*
  - *Mangrove Forest Coastal Grassland and the Coastal Forest areas, despite various factors negatively impacting biodiversity the habitats still represent sensitive areas that needs to be considered, with offsetting being the favoured method.*
- *Biodiversity Process Value*
  - *Connectivity: The LSA is isolated from a terrestrial perspective and borders on development and estuarine habitats, there are no natural habitat corridors present.*
  - *Ecosystem Services: The LSA, though relatively small, does from part of a larger system which contributes to water purification, soil stabilization, and carbon sequestration.*
  - *Landscape Role: The LSA does form part of the broader ecological network of Critical Biodiversity Areas, the isolated nature of the LSA is however a limiting factor.*

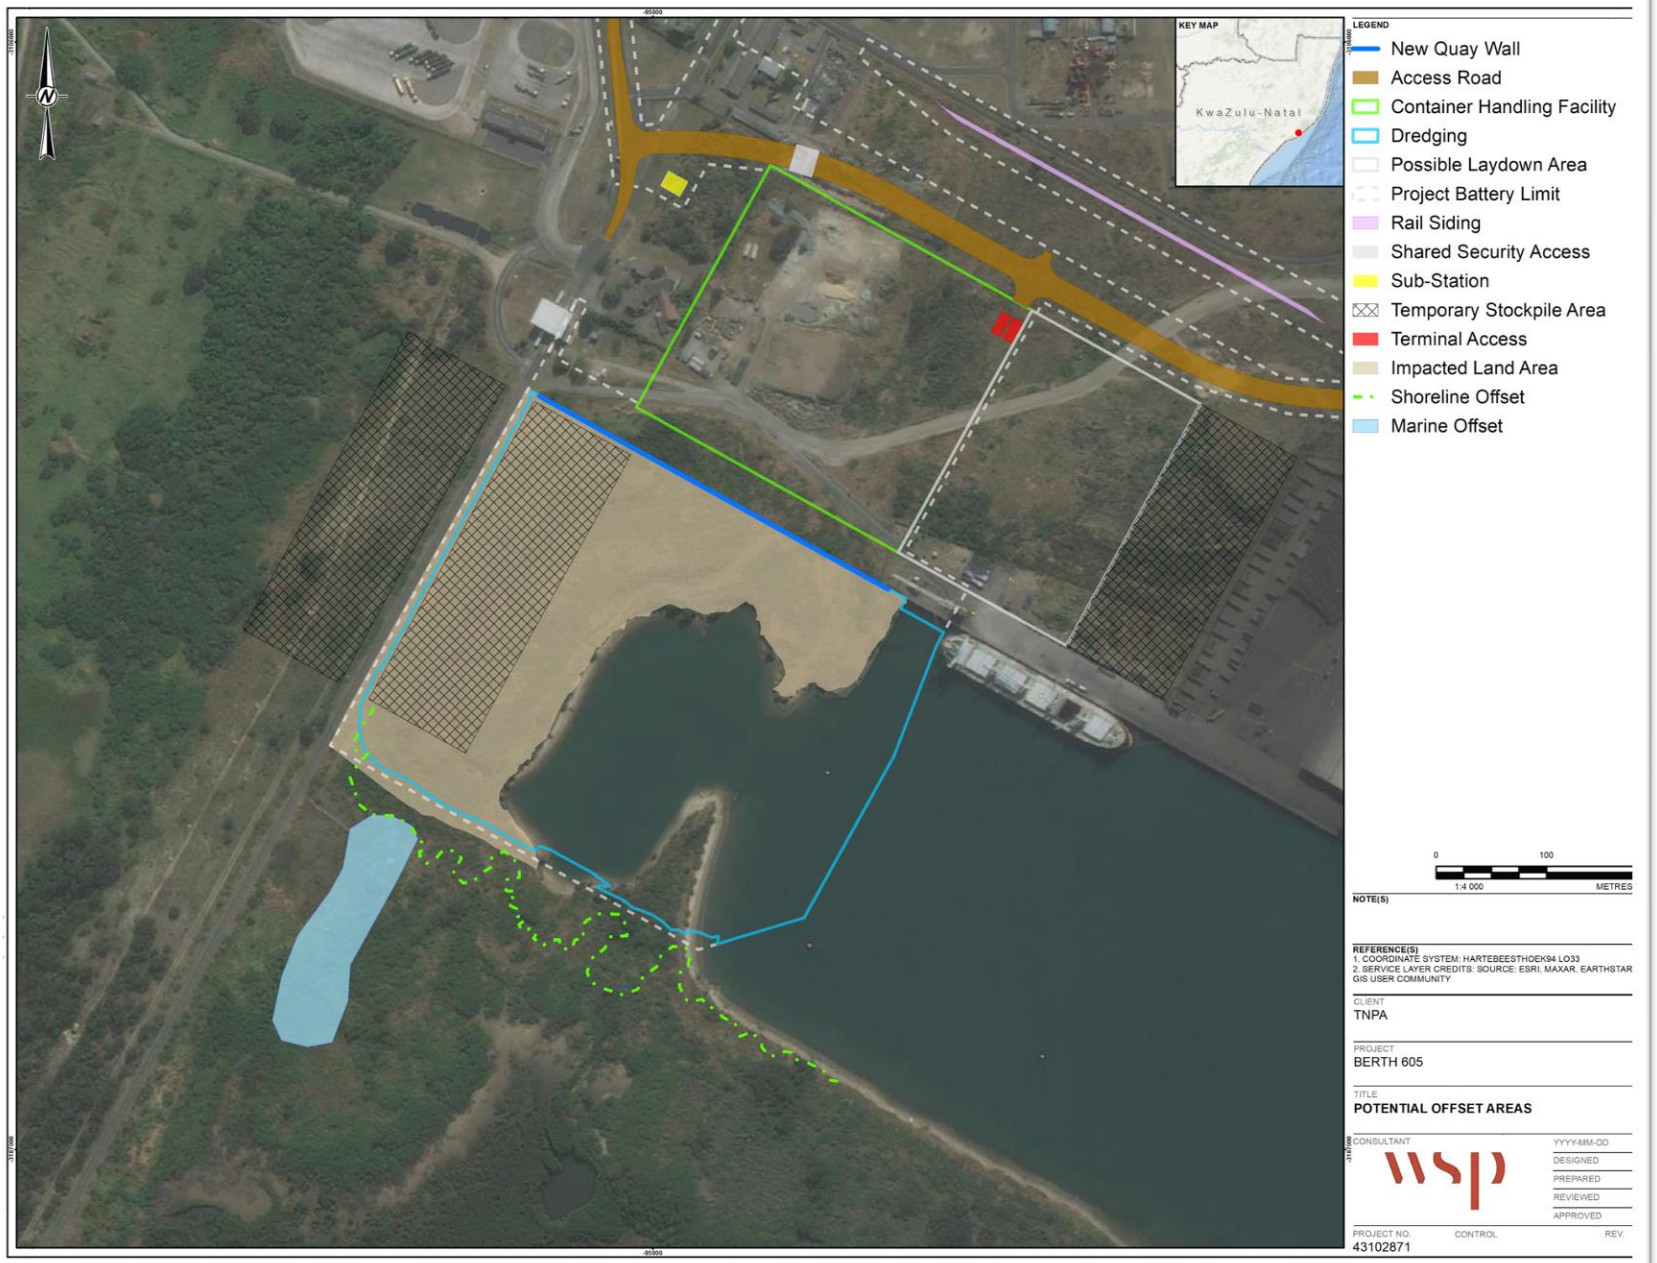
Condition of Potential Offset area

- *The proposed offset area needs to ensure Like for Like in terms of habitat types and size present (Coastal Forest, Mangrove Forest and Grasslands are required.*
- *This including habitat suitability and ecological condition.*
- *The possible biodiversity offset hectares required, would not be accommodated within the spatial confines of the designated area, which is approximately 7ha in size.*

Offset Area Requirements

Name	Infrastructure	Area ha	Offset ratio suggested	Total	Coastal Forest	Grassland	Mangrove Forest
Coastal Forest: High SEI	Container Handling Facility	0.286707	3	0.86	0.86		
Coastal Forest: High SEI	Dredging	3.825374	3	11.48	11.48		
Coastal Forest: High SEI	Recreated tidal Pool	0.12	3	0.36	0.36		
Coastal Forest: High SEI	Temporary Stockpile Area	0.941427	3	2.82	2.82		
Grassland: Medium SEI	Dredging	0.193537	1	0.19		0.19	
Grassland: Medium SEI	Temporary Stockpile Area	0.50817	1	0.51		0.51	
Grassland: Medium SEI	Temporary Stockpile Area	3.080214	1	3.08		3.08	
Mangrove forests Very High SEI	Dredging	0.430538	1	0.43			0.43
Mangrove forests Very High SEI	Temporary Stockpile Area	1.630604	1	1.63			1.63
Totals		11.016571		21.36	15.52	3.78	2.06

Offset Candidate Site



The engineering design makes specific environmental provision to a) include recreation of a tidal pool and b) a scalloped southern edge to the proposed Berth 605 area to maximise development of mud/sand flats to support intertidal ecosystems and wader habitat, in addition to terrestrial benefit associated with the proposed receiving area

Thank you
